Experience

Capgemini , Enterprise Architect (Cloud Architect) - Infrastructure change coordination (Apr 2024 – present): coordinate infrastructure changes, imports, and reshaping as Cloud Architect. - Vehicle data platform reliability (Sep 2023 – Dec 2023): made the platform production-ready for go-live; built automated snapshots and continuous database backups; wrote disaster-recovery runbooks; set up monitoring and alerting. <i>Terraform, Datadog, AWS Backup, GitHub Actions</i> - Multi-account AWS infrastructure rollout (Jul 2022 – Aug 2023): designed a scalable solution for rolling out infrastructure across up to 400 AWS accounts; led conceptualization and development. <i>Terraform, GitHub Actions, AWS API Gateway, EventBridge, CodeBuild</i>	Germany July 2022 – present 4 years 3 months
Exxeta AG , Senior Consultant / Consultant - Vehicle workshop appointment portal (Feb 2020 – Jun 2022): built a new portal from the ground up, front-end and back-end, with CI/CD-provisioned infrastructure and automated testing/monitoring. <i>Angular, Spring Boot, Kotlin, Concourse, New Relic, AWS</i> - Retail sample planning portal (May – Dec 2019): built a portal to plan and control retail sample scheduling. <i>Angular, Spring Boot, PCF</i> - Customer vehicle-profile portal (Apr 2017 – Apr 2019): extended a customer portal for managing vehicle profiles. <i>Angular, Spring Boot, PCF</i> - Reusable CMS components (Jan – Mar 2017): built new, reusable components for a content-management system. <i>Adobe AEM, Java, JavaScript</i>	Germany Jan 2017 – June 2022 5 years 6 months
HUK-Coburg Versicherungsgruppe , Internship / Working Student	Germany Feb 2013 – Dec 2013 11 months

Education

M.Sc. Hochschule Coburg , Information Technology and Enterprise Applications	Sept 2015 – June 2017
B.Sc. Hochschule Coburg , Information Technology	Sept 2009 – June 2015

Personal Projects

Home infrastructure as code Home server and its services managed entirely through Terraform and Ansible, version-controlled in Git; AWS (Route 53, S3, CloudFront, IAM/OIDC) and GitHub repo configuration from the same codebase, no manual changes to live infrastructure. This site is deployed the same way. <i>Terraform, Ansible, AWS, GitHub Actions, Debian</i>	Ongoing
Self-hosted GitHub Actions runner A fully automated Debian VM, provisioned with Ansible, hosting a dedicated self-hosted runner with dedicated disk storage placement. <i>Ansible, Debian, Virtualization, GitHub Actions</i>	Ongoing

Self-hosted Nextcloud platform

Ongoing

Private Nextcloud as a cloud-storage replacement, containerized with Docker; diagnosed an IPv6 DNS misconfiguration silently degrading WebDAV (~2 min operation dropped to ~1 sec after the fix). *Docker, Debian, DNS, IPv4/IPv6, TLS, WebDAV*

Personal finance automation

Ongoing

A Python workflow that reads a budget spreadsheet, drives a browser via Playwright to render a chart, and uploads the result to Nextcloud, on a schedule behind a cheap change-detection check. *Python, openpyxl, Playwright, requests, WebDAV*

Skills

Infrastructure & Cloud: AWS (API Gateway, EKS, RDS, Lambda, Route 53, S3, CloudFront, CloudWatch, SNS, SES, Secrets Manager, Fargate, CodePipeline, IAM/OIDC), Docker, Podman, Kubernetes/k3s, Terraform, Ansible, Traefik

Linux & Systems: Debian, SUSE Linux Enterprise, Bash/shell scripting, systemd, libvirt/KVM, DNS/TLS/network troubleshooting, IPv4/IPv6

CI/CD: GitHub Actions (incl. self-hosted runners), Concourse, Jenkins

Observability: Prometheus, Grafana, Alertmanager, Datadog, New Relic

Security: GPG, pass, SOPS, Trivy, Black Duck

Databases: PostgreSQL

Languages & Frameworks: Java, Kotlin, Python, Spring Boot, Maven, Gradle, TypeScript, JavaScript, Angular, Node.js

Methodologies: Agile, Scrum, SAsFe, DevOps

Languages

German: Native

English: Business fluent
